HCL INTERNSHIP - MINI PROJECT

Mitte: Crime prediction for Large cities

Crime analysis is a methodical approach for identifying and analysing pattern trends in crime with the increasing orgin of computerized systems, crime data analysts can help the Jaw and enforcement officers to speed up the process of solving crimes.

- Using the concept of Machine Learning, we can analyze previously unknown, useful information from an unstructured data

Software Requirements

* Programming Language - Python

* IDE - Jupyter / Py charm

* Flask, css, HTML.

Scope:

Because of the Increased orime state over the years, we will have to handle a huge amount of crime data stored in warehouses which would be very difficult to be analyzed manually, so there is a need to use advance technologies in order to keep police ahead of them. Purely based on the crime analysis using Machin Reaming Volgorithm.
